

R82 Convaid provides you with the premier portfolio of lightweight, compact, foldable and convenient pediatric Tilt-in-Space wheelchairs.

## Tilt-in-Space

- Provides position change for those who cannot independently shift body weight
- Provides position change for children who cannot maintain pelvic, thoracic, or head position and/or balance against gravity for prolonged periods of time
- Provides appropriate position for children who are at risk for:
  - Respiratory complications: Tilt can be used to promote thoracic and diaphragm extension
  - Digestive complications: Tilt can be used to promote postures that reduce the risk of G.I. complications such as gastritis, gastric reflux, esophagitis and/or bowel impaction
  - Postural hypotension: Tilt encourages blood flow above heart level in case of blood pressure drops
  - Autonomic dysreflexia: Tilt allows the child to be brought quickly into an upright position to assist in lowering blood pressure
- Provides position change while reducing the risk of extensor spasticity
- Provides position change without the risk of shear forces (pelvis sliding)

Whatever your pediatric wheelchair needs, R82 Convaid has a chair for you!

# Pediatric Tilt-in-Space Portfolio

The premier collection of tilt-in-space wheelchairs focusing on comfort, function and positioning.

R82  Convaid

Whether it is style, function, positioning or portability, we offer a lightweight, tilt-in-space wheelchair to meet the goals of the clinician while providing the aesthetics and ease of use that parents seek.

Whatever your preference – R82 Convaid will have you on the move in no time!

**TREKKER: ADAPTABLE:** The Trekker is a lightweight foldable system that can also be rotated for rear facing position. The Trekker features a highly customizable seating module that can be removed from the base. Offers optional recline and positioning.

**STINGRAY: BEAUTIFUL:** The Stingray features Danish design and a 180° turnable seat that allows the child to face rearward or backward. The 180° turn can be accomplished without removing the seat or the child.

**KUDU: MANEUVERABLE:** For those caregivers and users requiring a weight shifting tilt in a non-traditional look, the Kudu offers effortless tilting and an unique self-propelling wheel configuration option.

**RODEO: EASY:** If you prefer a simple approach yet still want to maintain 45° of tilt then the Rodeo with its clamshell fold flat design and adjustable tension upholstery is the choice for you.

**MULTI PURPOSE:** The Multi purpose and Multi Purpose X frames are the perfect complement to the innovative X:Panda seating system with a Dynamic Back option. The lightweight, low profile design is combined with an easy interface for the X:Panda to allow easy removal.
