### I am your therapy bicycle for more

**balance.** I am there for you if the pleasant weather tempts you to take a trip around the lake. But I can do much more than that if you take me on an excursion. Depending on how steady you are on your bike, my stabilizer wheels can be adjusted from rigid to very soft spring settings. In this way, you can easily train your balance. Apart from that, I look really cool: without my supporting functions, I look just like a bicycle!

# momo therapy bicycle.

You can find a diverse range of accessories for optimum support & individual equipment from page 122.

**You have the choice! Between many handlebars, saddles, foot pans, head supports and different drives - from rigid toothed wheels right up to the 3-gear hub gear with reverse option!**

**Frame colours 12"**

**Frame colours 16" and 20"**

**Frame colours 24" and 26"**

**Using me, you can train your balance, coordination and endurance.**

#### **Dynamic stabilizer wheels**

can be adjusted to your capabilities. If set to rigid, they will initially give you security and build trust. Over the course of your therapy, they can be adjusted to become very gentle suspension stabilizers. These can easily balance you as you go round bends and also offer sufficient drive force on dirt roads.

# With E-drive.

**Did you know that your momo therapy bicycle. can also be equipped with an electric drive? This supports you where your own power is not quite sufficient. Whether it's a short or long trip to town or to the lake.**

The basis of our system is Heinzmann's DirectPower e-drive in the front wheel. This is a noiseless direct drive, which is optionally available with a starting aid. For experienced drivers the drive is also available in an "advanced version". This allows a more powerful drive. The "beginner's version" can also be used to control the Eco, Standard or Power mode via display.

With this power-supporting electric drive we offer an ideal addition to your **momo therapy bicycle.** and help you to achieve your set targets.

We are at your disposal for an individual consultation.

### Button or twist handle operation

allow you to set the mode, and the start-up assistance if necessary, including during travel.

### DirectPower E-Bike drive

is designed brushless and without gears, minimizes maintenance and wear and tear and eliminates motor noise.

### LCD display

shows you information on the support level, speed and battery status - and is easy to read, even in bright / sunny surroundings.

**The battery can also be removed for charging. The charge level can be read on the display.**
